ABOUT ME

My name is Sergey Markovich.

I'm a full stack developer in building modern responsive web applications and using wide set of technologies.

Also I have a good experience with blockchain development like as smart contract development, dApp building, front end integration with smart contract using web3. I have strong knowledge in developing single page applications (SPA) with pixel perfect UI/UX design.

I'm a hardworking and dedicated professional front-end developer/user interface designer with a keen eye for detail and a determination to deliver the very highest quality. I take great pride in my work, and I always try to better myself with every project I work on.

I like to write semantic, cross browser compatible code by hand that is re-useable, maintainable and easy to understand.

Cheers!
